17. Post Acute Rehabilitation

This chapter includes those facilities that are most often paid for by insurance: they offer very specialized and comprehensive services for people with TBI, but at a considerable cost. For a much more comprehensive and complete listing of these agencies, consult the National Directory of Brain Injury Rehabilitation Services, published by the Brain Injury Association of America (BIAA) (1/800/444-6443). This book is very useful for comparing and selecting services for people with TBI and we encourage you to consider purchasing it if you do much work with people with TBI. If you are a survivor or family member, you are invited to check for organizations in your area who can show it to you. The BIAA also has a flyer available on selecting and monitoring services, and we also encourage you to read this. Upon your request, the BIAA will mail you a list of publications they have available.

It is important to remember that when these facilities are suggested (usually at hospital discharge or soon after), the insurance money that funds these services is usually limited. Perhaps some of the money that would be paid to these facilities could be better spent further down the line, when the person with the TBI needs funds for education or work training. Those who run the for-profit facilities refer to the 'recovery curve' which flattens as time passes; they say that the most benefit for the person can be realized when the most effort and resources are expended as close to the time of injury as possible. Most significant changes in functioning do occur shortly after the injury, but improvement continues, albeit more slowly, often forever. Remember, if there is a 'cap' on insurance policy benefits, you (the survivor, the caregiver, or the concerned professional) should have some input into the spending of the settlement money.

Centre For Neuro Skills

661/872-3408
